

Hobbs & Associates (www.hobbsassociates.com) provides heating ventilation and air conditioning (HVAC) products and engineering services to commercial and industrial building contractors, architect-design firms, and business owners. We work with our business partners to create enduring community infrastructure such as schools and colleges, hospitals, military and municipal structures, entertainment venues, hotels, and multi-family housing.

Since 1984, Hobbs & Associates has continued to maintain a strong family culture and employs over 170 employees working across three states and the District of Columbia (Washington DC). For over 25 years, Brad Hobbs has served as President and CEO and has continued to grow the business through dedicated service and commitment to our customers.

Our end users include the Pentagon, HCA Healthcare facilities, multiple universities and entertainment venues, Eastman Chemical in Tennessee, the historic Cavalier Hotel in Virginia Beach, and Music City Center in Nashville, TN to name a few. Hobbs also works in a variety of specialty HVAC applications to maintain indoor air quality (IAQ) specifications in hospitals and operating rooms, museums, data storage centers, warehouses, casinos, correctional facilities, and uniquely designed climate-controlled rooms for indoor agriculture.

As a family-owned business, we are dedicated to our customers, local communities, and employees. Our customers recognize and appreciate that we deliver on-time service before, during, and after installation. Every Hobbs project is backed by our domain experts, commitment to quality, and strong foundation of HVAC manufacturing solutions.
